I have already learned that you can use the following statement to get the name of the table and columns you are interested in: `Cursor c = db.query(tableName,columnName,null,null,null,null,null,null); c.moveToFirst(); String tableName = c.getString(0); String columnName = c.getString(1);` From this I can use the columnName to get values from a table in the database. Now my question: What if I want to INSERT values into a table if it doesn't exist? I could just use `c.moveToFirst()`, but is there a better way? I could also use the following 82157476af
